

Using Screencasting...

...to Create Learning Objects that
Communicate, Train, and Teach

Steve Garwood

Let's just see one... @4min

<http://bit.ly/fGeaHJ>

How I've used Screencasts

- Teach Technology
 - Mac/Win OS, MS Office, Adobe CS5, xhtml, css, etc.
- Overview/Review
 - Syllabi, class FAQs, Assignments
- Explain Policies, Procedures
 - Emergency Policies
 - ILS in the Library

What I use to Screencast

- Applications
 - Jing
 - Camtasia
 - Captivate
- Microphone
 - Logitech ClearChat Comfort USB
 - Blue Yeti USB
- Webcam
 - Logitech 9000 or 910

Student Comments

(Advice to future students)

- The Camtasia programs that Steve put together were invaluable!!! Review them, take notes, review them again. The picture was worth a thousand words - and the added words made it all the more clear.

Student Comments

- Watch the Camtasia lectures first thing. Then use them again, as you need to. Within a few minutes of seeing & hearing Steve go through steps you get an idea of what the whole unit/week is about.

Student Comments

- Listen to the Camtasia lectures first as they are very helpful. I could hear Steve teaching, and something about his voice makes it evident that he is enjoying this class and that he really wants you to enjoy it as well.

Student Comments

- I found the video lectures one of the most helpful parts of this class. Reading alone does not always make technology concepts clear, but seeing someone else going using the different applications is indispensable. In an online course it can be nice to hear a human being on the other side of the computer.

Thank You

I look forward to your questions
